Georgia's Pharmacists: Improving People's Health

By 2032, the U.S. could see a shortage of as many as 55,200 primary care physicians. Even if nurse practitioners and physician assistants are fully utilized, patient needs will not fully be met.¹

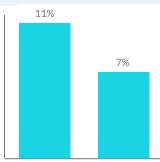

Georgia has 229 designated HPSAs and only 43% of the primary care needs in those areas are currently being met.²There are 9,110 highly trained pharmacists in GA who are ready to provide valuable healthcare services.³

Meeting Patients' Needs in Georgia

more primary care providers are needed

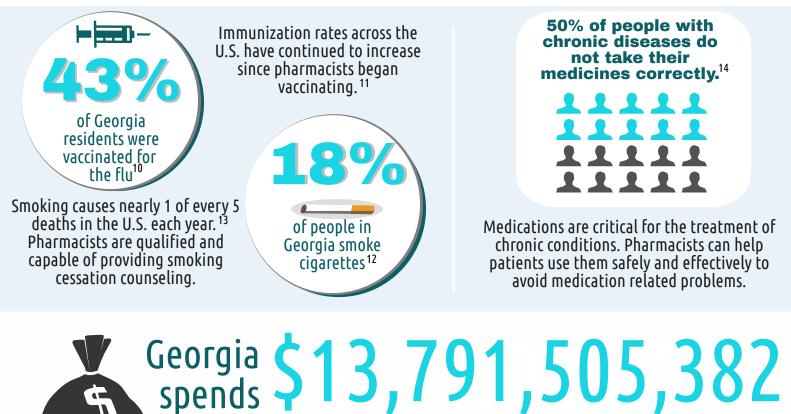

Diabetes

Diabetes is a complex condition that is often managed by multiple medications. Pharmacists can optimize care and help patients understand their medications and their condition in order to improve outcomes and avoid complications.⁷

Cardiovascular Disease (CVD)

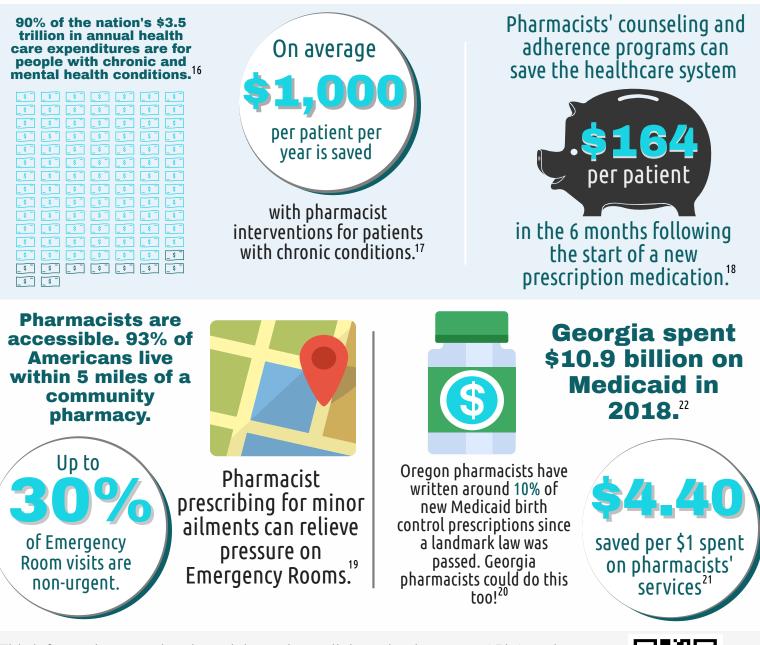

Diabetes CVD Prevalence of chronic disease in Georgia⁹

For patients with uncontrolled high blood pressure, waiting even two months to optimize medications increases the risk of complications, including hospitalizations. Pharmacists are highly accessible members of the care team who significantly improve blood pressure control and can provide timely follow-up and monitoring to improve outcomes.⁸

Investing in pharmacists' services optimizes the use of those prescription medications. Decades of research have proven the value of including pharmacists on healthcare teams. Improved health outcomes, lower costs, and increased access to care could be a reality for Georgia residents if pharmacists were fully empowered to serve as patient care providers.

annually on prescription medications.¹⁵
